New MTB tyre casings from Vittoria

Choose the one that fits you best!

Mountain biking is probably the most fragmented cycling segment of all. In between the Gravity world and the Cross-country world, which we can easily identify as two opposite and well recognizable MTB branches, there have been many hybrid disciplines arising in the last few years. Whatever kind of mountain biking a rider may practice, he has specific needs in terms of tyre performances of course. That's why Vittoria invested in the development of a complete selection of MTB casings. Each casing has definite features that makes it suitable for a specific usage.

XC-RACE (CROSS-COUNTRY)

XC-RACE is the lightest Cross-country tyre casing from Vittoria. Delivering top level dependability and performance, XC-RACE is the perfect choice for competitions. Tubeless-ready aramid beads combined with a single layer of Nylon 120 TPI make a lightweight package for ultimate speed in race. XC-RACE tires use **GRAPHENE 2.0** tread with **4 compound (4C)**: the best technologies from Vittoria (read more [here](#)).

The following products are available in XC-RACE construction:

- Mezcal
- Barzo
- Terreno
- Peyote

Discover them all [here](#).

XC-TRAIL (CROSS-COUNTRY)

XC-TRAIL is the strongest Cross Country tyre casing from Vittoria. Designed for the most demanding and challenging courses, XC-TRAIL uses an additional 120 TPI Nylon sidewall layer for ultimate puncture protection. The tubeless-ready beads allow for a light weight construction. XC-TRAIL tires use **GRAPHENE 2.0** tread with **4 compound (4C)**: the best technologies from Vittoria (read more [here](#)).

The following products are available in XC-RACE construction:

- Mezcal
- Barzo
- Gato
- Peyote

Discover them all [here](#).

TRAIL (ENDURO AND TRAIL)

TRAIL is the tyre casing option designed for delivering ultimate puncture protection for Enduro and Trail use. It uses an additional 120 TPI Nylon sidewall layer and anti-inch-flat inserts (APF) to deliver the best protection from cuts on the sides and from pinches. APFs are strong and flexible inserts made with rubber. TRAIL casing

uses tubeless-ready aramid beads. TRAIL tires use **GRAPHENE 2.0** tread with **4 compound (4C)**: the best technologies from Vittoria (read more [here](#)).

The following products are available in TRAIL construction:

- Martello
- Mota
- Morsa

Discover them all [here](#).

ENDURO & EMTB (ENDURO AND E-ENDURO)

ENDURO & **EMTB** tyre casing is the strongest and most resistant casing from Vittoria. Designed to handle the stronger impacts generated by the weight of electric mountain bikes, and to deliver high performance on the most demanding Enduro courses, ENDURO & **EMTB** casing use a double layer of Nylon 120 TPI (2-ply casing). Protection from cuts and pinches is provided by the anti-pinch-flat (APF) inserts. APFs are strong and flexible inserts made with rubber. ENDURO & **EMTB** casing uses tubeless-ready aramid beads. ENDURO & **EMTB** tires use **GRAPHENE 2.0** tread with **4 compound (4C)**: the best technologies from Vittoria. (read more [here](#)).

The following products are available in ENDURO & **EMTB** construction:

- Martello
- Mota
- Morsa
